FORM 9. Certificate of Interest

Form 9 (p. 1)  
March 2023

**UNITED STATES COURT OF APPEALS  
FOR THE FEDERAL CIRCUIT**

**CERTIFICATE OF INTEREST**

**Case Number** 2025-1616

**Short Case Caption** Vicor Corporation v. ITC

**Filing Party/Entity** Licensing Executives Society (U.S.A & Canada), Inc.

**Instructions:**

1. Complete each section of the form and select none or N/A if appropriate.
2. Please enter only one item per box; attach additional pages as needed, and check the box to indicate such pages are attached.
3. In answering Sections 2 and 3, be specific as to which represented entities the answers apply; lack of specificity may result in non-compliance.
4. Please do not duplicate entries within Section 5.
5. Counsel must file an amended Certificate of Interest within seven days after any information on this form changes. Fed. Cir. R. 47.4(c).

I certify the following information and any attached sheets are accurate and complete to the best of my knowledge.

Date: 08/27/2025

Signature: /s/ Mark S. Raskin

Name: Mark S. Raskin

## FORM 9. Certificate of Interest

Form 9 (p. 2)  
March 2023

<b>1. Represented Entities.</b> Fed. Cir. R. 47.4(a)(1).	<b>2. Real Party in Interest.</b> Fed. Cir. R. 47.4(a)(2).	<b>3. Parent Corporations and Stockholders.</b> Fed. Cir. R. 47.4(a)(3).
Provide the full names of all entities represented by undersigned counsel in this case.	Provide the full names of all real parties in interest for the entities. Do not list the real parties if they are the same as the entities.  <input checked="" type="checkbox"/> None/Not Applicable	Provide the full names of all parent corporations for the entities and all publicly held companies that own 10% or more stock in the entities.  <input checked="" type="checkbox"/> None/Not Applicable
Licensing Executives Society (U.S.A & Canada), Inc.

## **INTEREST OF AMICUS CURIAE**

The Licensing Executives Society (U.S.A. & Canada), Inc. (LES) is a non-profit professional association of intellectual property (IP) licensing and technology transfer professionals. LES's mission is to empower its community to drive strategy, transactions, and deals involving intellectual property business and law. LES also advances best practices in IP transactions and promotes efficient, predictable markets for innovation. LES routinely files amicus briefs to offer practical, neutral perspectives on issues that affect licensing certainty, contracting practices, and reliance interests across industries. LES takes no position on the ultimate outcome of this appeal.

## **INTRODUCTION**

Patent licensing is central to IP commercialization: it enables innovators to share technology with partners, scale production, and bring products to market. Licensing also fuels collaboration, particularly in industries like semiconductors, AI, and data-center infrastructure, where no single entity controls all the know-how required for system integration. Thus, predictable licensing frameworks reduce transaction costs, promote reliance on patent rights, and encourage innovators to disclose and share technology.

These objectives, however, depend on legal certainty and contractual clarity in license formation and scope. In fast-moving supply chains, especially for

components used in data centers and AI systems, businesses rely on predictable contracting frameworks and the settled meaning of patent rights to allocate risk and invest at scale. Moreover, in an effort to achieve improvements in the protection of all types of IP within an organization and throughout all levels of its global supply chain, LES has developed a standard related to IP Protection Management Systems. (ANSI/LES ICBR Version 1.0-2022 Management System for the Protection of Intellectual Property in the Supply Chain).

This appeal presents a common but consequential question at the intersection of state contract law and federal patent policy: when, if ever, boilerplate IP-license terms embedded in purchase orders and follow-on email traffic should be treated as part of the parties' agreement. Without favoring either party, LES urges the Court to articulate technology-neutral principles that promote uniformity, avoid "license-by-boilerplate" outcomes, and respect reliance interests, particularly where Section 337 remedies can disrupt global supply chains.

### **SUMMARY OF ARGUMENT**

Predictable licensing frameworks are especially critical for patent licensing, where inadvertent or unintended grants of rights can distort negotiations, undermine the value of portfolios, and chill investment in innovation.

First, state laws and Uniform Commercial Code (U.C.C.) principles, not opportunistic phrases, should determine whether additional terms become part of a

contract formed through standardized forms. Where parties exchange competing forms that are each expressly conditional on the other side's assent and then perform, § 2-207(3)'s "knock-out" rule supplies the governing terms while conflicting boilerplate language (including broad IP-license language) drops out.

Second, after *Loper Bright Enterprises v. Raimondo*, 603 U.S. 369, 144 S. Ct. 2244 (2024), the Commission's legal interpretations receive no Chevron deference. Clear Federal Circuit guidance on how § 2-207 applies to embedded IP terms will shape nationwide contracting practice and reduce forum-specific uncertainty.

Third, reliance interests around patent portfolios, and the constitutional right to exclude, favor predictable, text- and conduct-based rules. Section 337's border remedies magnify the cost of ambiguity, so uniform standards are essential.

Fourth, a fundamental principle of contract law is determining and giving effect to the intent of the parties. Absent a clear mutual assent to such a patent license, the Court should decline to infer such an assent.

## **ARGUMENT**

### **I. Uniform Application of U.C.C. § 2-207 Should Control Contract Terms When Parties Exchange Conflicting Forms.**

In modern supply chains, parties routinely exchange preprinted forms that conflict on material and minor terms. When each side's writings are expressly conditional and the parties nonetheless perform, § 2-207(3) supplies the contract comprised of agreed terms plus U.C.C. gap-fillers; conflicting terms are excluded.

Applying this neutral, text-first framework promotes uniformity and prevents a one-sided expansion of rights, such as a perpetual, royalty-free, boundless IP license, through unilateral boilerplate language.

LES respectfully urges the Court to reaffirm that (a) the “knock-out” rule governs where competing forms are expressly conditional and followed by performance; (b) the focus is on objective manifestations of assent and course of dealing; and (c) Courts of Law should be cautious about importing sweeping IP grants from a buyer’s form where the seller’s form expressly disclaims any license-by-sale.

## **II. Reliance Interests Around Patents Counsel in Favor of Predictable Contract-Formation Rules.**

Patent licensing is the mechanism by which investments in innovation are monetized and disseminated. These investments allow patent owners to commercialize technologies that may otherwise go unexploited and enable firms to integrate complementary innovations. Thus, predictable rules for incorporating license language into high-volume transactions directly support innovation incentives.

Furthermore, entire agreements can be, and often are, dedicated to the transfer or grant of intellectual property rights. Such circumstances argue for the treatment of such terms as material in any contract and not relegated to boilerplate and subject

to formulaic form battles, where an unintentional change of ownership could be catastrophic to a party.

When licensing outcomes turn on ambiguous boilerplate or stray emails, parties face higher risk and higher costs, deterring collaboration. By contrast, uniform and predictable rules foster deliberate, negotiated licensing agreements that drive commercialization across industries. Dillon Miller, *Using Boilerplate Clauses and Its Risks*, Ahuja & Boss, LLP (Dec. 20, 2024), <https://dmablaw.com/using-boilerplate-clauses-and-its-risks/>.

Stable expectations about the scope of patent rights and the availability of meaningful remedies enable investment in research and development (R&D), manufacturing, and long-term collaborations. Predictable rules for incorporating license language into high-volume transactions further support innovation incentives.

### **III. Section 337's Border Remedies Magnify the Cost of Ambiguity and Favor Uniform Standards.**

Limited exclusion orders and cease-and-desist orders can impose swift and sweeping consequences on supply chains and downstream customers. Technology-neutral guidance that confines “license-by-boilerplate” theories and clarifies the standards for contractual assent will mitigate disruption, regardless of which party ultimately prevails on the merits.

#### **IV. Determining and Giving Effect to the Intent of the Parties Is a Core Principle of Contract Law.**

One of the fundamental tenets of contract law is that agreements must be construed to give effect to the intent of the parties. See U.C.C. § 1-103(a)(2) (requiring that the U.C.C. be applied “to promote its underlying purposes and policies, which are ... to permit the continued expansion of commercial practices through custom, usage, and agreement of the parties”). This principle is especially important where patent licensing is at issue, because such rights are deliberate and valuable concessions.

Absent clear mutual assent to such a license, Courts should decline to infer one. Recognizing the materiality of terms related to IP rights can refocus the analysis on the parties’ intent as a guiding principle to ensure that patent holders retain control over the scope of their rights, that licensors and licensees obtain the benefits of their bargains, and that technology transactions reflect negotiated commercial realities rather than inadvertent boilerplate terms.

#### **CONCLUSION**

The Court should safeguard the integrity of patent licensing as a cornerstone of commercialization and collaboration by grounding its guidance in predictable contract-formation rules. Such clarity will promote uniformity in licensing practice, strengthen innovation markets and the IP ecosystem, and protect the reliance interests of licensors and licensees alike.

LES respectfully urges the Court to articulate neutral, technology-agnostic principles that (1) apply § 2-207's knock-out rule when conflicting, expressly conditional forms are followed by performance; (2) recognize the reliance interests that favor predictable contract formation rules, especially when implicated by Section 337 remedies; and (3) effectuate the clear intent of the parties with respect to the creation or denial of IP rights. Such guidance will promote licensing uniformity, contractual certainty, and healthy markets for innovation across industries.

Respectfully submitted,
